Search Notes

Dear Examiner Diaz:

Please find attached the results of your search for 10/043403.

The search was conducted using the mandatory database lists for Business Methods.

These other sources were also used: Internet, STN

If you have any questions, please do not hesitate to contact me.

Thanks for using EIC3600!

National Production and Financial Database

Apr 15, 2001 12:00 PM
Daniel Uthe

Database enables comparison of pork operations and helps identify long-term profit opportunities for producers.

The National Production and Financial Database forms the central hub of a coordinated, knowledge-based information strategy developed with checkoff funds. The database was created to receive the standardized production and financial information of pork producers throughout the U.S. Additionally, it is designed to ensure long-term profit opportunities for producers regardless of operation size. Production and financial software vendors have been engaged in this process to make accurate comparisons between different types of operations.

In the past, groups have created databases with either financial or production data exclusively. Standard terms and calculations were not available. Producers commonly submitted data to a service bureau that entered the data. Producers received benchmark-type data after everyone had submitted data.

The National Production and Financial Database has changed all this. The database is outsourced to a firm that builds and manages database applications for Internet use. The National Pork Producers Council (NPPC) administers the program.

Producers access the database through a secure Internet connection to contribute to or view their reports. Data is real-time — it's instantly updated, and current values are used to create reports that can be printed or viewed on screen.

Another benefit of having the database on the Internet is the ease of changing a calculation or adding a new benchmark. All users get all upgrades at the same time.

Big or Small

Producers of any operation size can fulfill the minimum standards necessary to contribute data. Producers' participation will be facilitated by their software, which will automatically organize the appropriate data elements, summarize it in a standardized form ready for uploading to the database.

For the interim, the NPPC has developed Pork Office, a computer program that takes data from existing software systems and assembles it for transmission to the standardized database. The Cooperative Extension Service is adapting spreadsheets to send data to the National Database via Pork Office. Data submissions will undergo a detailed filtering process to

prevent errors from entering the database. If producers submit outlying values, they will be prompted to correct or verify them to guarantee their accuracy.

Data definitions and standard calculations are in the Technical Reference Manual and are available from NPPC as hardcopy or on CD-ROM. Software standardization not only allows producers to load comparable data into the database, but it also enables them to switch software without losing historic tracking data because of inconsistencies between software packages.

Production, Financial Elements

The database is divided into more than 70 production data elements and more than 100 financial data elements. These data elements are used in various combinations to produce about 250 production, financial or combination benchmarks. New data elements or benchmarks can be added any time and are available to all users.

Currently, producers are able to enter only production data in the database and therefore can use only the production benchmarks. Examples of reproductive benchmarks are shown in Figure 2. (For more details, see "Benchmarking Analysis Drives Action Plans" on page 14.)

Producers have spent the past year setting up their charts of accounts to match the standards and entering their financial data. A full year of data is required before it can be uploaded into the database for benchmarking.

Database Access

Admission into the database requires a user name and password for secure access. Producers or their consultants can log on to the database, set up, change and manage the structure of their farm and load data. Internet-based access allows producers to load and view their data from home or anywhere at any time of day. The database's address is www.benchmarks online.com.

Producers use a program called an Internet browser, such as Netscape or Microsoft Internet Explorer, to view the database. On the first visit, a producer can register by clicking on the word "register," providing information requested and choosing a login name and password. Once submitted, an e-mail is sent to the database administrator, who then activates the producer's database access and e-mails him an acknowledgement of the activation.

A trial registration is available for producers to have temporary access to sample farm data. An e-mail is sent to the user noting their access will automatically cease on specific date. A producer must meet specific educational requirements before being granted access to the database.

First Step

The first step a producer must take when he logs on as a user is to set up an organization. (Figure 1 shows the first screen after the login.) He can choose how he wants to divide his operation based on how he keeps his financial records.

For example, if a producer keeps financial records as a whole unit, he will only be able to benchmark the operation as a single organization. Their production records will still come in by each phase of production, and they will have production information to benchmark for each production phase. However, certain financial information will not be available.

If a producer has several different operations and keeps financial records for

each unit as a separate business, he can enter each unit as a separate organization, and each can be benchmarked as an individual unit.

The database also provides an opportunity for a producer to combine multiple organizations into one group for benchmarking.

Or, a family operation might have several different business organizations. In that case, they can benchmark each operation and then combine them to benchmark the whole operation. If they have three separate finisher sites, for example, they could benchmark each unit separately and then combine all finishing sites into one and benchmark the combined unit.

Similarly, producers in a consulting group could combine their data for benchmarking. This would allow producers to compare their group to the whole database plus compare themselves to the average of their group.

Even with a new level of standardization, the database still does not completely accomplish the goal of comparing all operations on the same terms. Not all operations are alike. The database also includes more than 100 attributes that are specific characteristics assigned to an operation. These attributes are in four categories — general, breeding, nursery and finishing.

The "general" attribute category could include an operation that is part of a marketing cooperative or purchasing cooperative. Or, perhaps, the general attribute could be part of a vertically coordinated system or production network. It also could be defined by the method used in selling the animals (contracted, open market, etc.). This information will help producers determine whether one method of doing business is really better than another.

There are many opinions about whether it is better to be part of a coordinated system or to remain independent. These benchmarking capabilities can help analyze this question.

Another case in which attributes can be beneficial to benchmarking is when facilities are different. The use of attributes allows producers to look at the age of facilities and see if newer facilities are more efficient, for example. There are attributes for whether animals are single source or co-mingled at some point in the production process.

Attributes that could differentiate farrowing facilities might include flooring type, ventilation system, etc. Type of feed processing could be compared. Producers may want to analyze whether home-raised feedgrains are better than purchased.

When using a benchmark for feed cost, it is important to compare it to all operations. However, it also might be valuable to compare your cost to only operations that also raise their feedgrain. Geographic comparisons, by states or regions, also can be benchmarked.

The use of attributes is a good way to make sure you are comparing similar operations or at least identifying specific differences to compare.

Work in Progress

The National Production and Financial Database has been developing for more than five years. It will continue to grow in functionality. It will be used to provide information for all producers to help them identify and capitalize on competitive advantages.

Other agriculture groups are looking at the pork production model, and some are developing standards for their segment.

The National Production and Financial Database developers are involved with these groups and continue to play an active role in developing standards for all of agriculture. It is important to the future of food production in the U.S.

Welcome to www.pigwin.com.

PigWIN® - Your Pathway to Increased Pig Profits

PigWIN® is the new generation pig production management and monitoring software written specifically for Microsoft Windows®. FarmWise Systems, Inc., located in St. Paul, Minnesota, works closely with the PigWIN® development team. We have been distributing, supporting, and recommending improvements to PigWIN® since its introduction to the Americas in 1998. Note: Certain PigWIN® modules are now also available as "PigCHAMP® 5 for Windows." Don't be confused - the software is identical - only the module names are different.

OUR POLICY: Your data is your business. Software development, distribution, and support is our business. We respect your privacy. FarmWise Systems DOES NOT require you to share your pork production records with us - or with anyone else. Switch to PigWIN® today and assure the confidentiality of your data.

Evaluate PigWIN® FREE for 30 days on your own computer. To receive a CD containing the PigWIN® 30-day trial version, call us at **1-877-4PIGWIN** or **651-765-8240** or click on the link to send an E-mail message to us at: support@farmwise.com. We will send you a CD at no charge.

- **Annual Subscription - No lump sum purchase or upgrade costs**
- **PigWIN® subscription includes user support by telephone, e-mail or fax**
- **Modular format - purchase only what you need.**
 - **PigLITTER** .. Breeding Herd Management
 - **PigGAIN** Nursery and Finisher Pigs
 - **PigHERD** Database Applications / Custom Report Generator
 - **PigPAD** Data Entry & Recall with PalmPilot® or Handspring Visor®
 - **PigRANK** Multiple Farm Comparisons
 - **PigBATCH** .. Rapid Keyboard Data Entry.
- **Remember - The continued confidentiality of your pork production data is assured when you use PigWIN®. Don't delay. Switch to PigWIN today! Call and ask for your FREE, no obligation 30-day trial CD.**

GoDigital wires up the hinterlands

Hytha, Michael

Contra Costa Tri-Valley Business Times (Pleasanton, CA, US), V1 N52 p8

PUBL DATE: 990917

WORD COUNT: 615

DATLINE: Fremont, CA, US, Pacific

TEXT:

...for a handful of lines to get the same \$11 a month, there's no **profit** there."

As with their urban counterparts, rural customers are demanding ever more lines as they add fax machines, **computers** and multiple voice lines. Gas stations, for example, require one phone line for each pump that has a pay-at-the pump card reader.

GoDigital won't disclose a unit **price**, but the company claims that each new phone line **costs** about \$300 to \$500 using GoDigital's equipment.

That's roughly a tenth of what it would take to run new wire to a remote location, said Cruttenden Roth telecommunications **analyst** Glenn Powers in Seattle. Powers, though not familiar with GoDigital, said rural areas are becoming far more important to telecommunications companies, largely because of businesses, including **farms**, that rely on data transmission.

While most of the equipment that transforms ordinary copper wires...

... risk. Three risks that concern farmers most, according to USDA's 1996 Agricultural Resource Management **Study**, are uncertainty regarding commodity **prices**, declines in crop yields or livestock production, and changes in government law and regulation.

Farmers have a variety of tools for cutting **risk**, such as diversification of production across multiple enterprises, entering into production and/or marketing contracts, and keeping extra cash on hand for emergencies. Other strategies include crop or **revenue** insurance, futures market trading, and

off-farm employment. When individual efforts to deal with financial stress fail and large numbers of **farms** face significant financial loss, the Federal government has stepped in to assist farmers with direct...

maintaining cash reserves or evening out cash flow). Using risk management does not necessarily avoid **risk** altogether, but instead balances **risk** and return consistent with a farm operator's capacity to withstand a wide range of...

...respect to enterprise mix, financial situation, and other business and household characteristics, many sources of **risk** are common to all farmers, ranging from **price** and yield **risk** to personal injury or poor health. But even when facing the same **risks**, **farms** vary in their ability to weather shocks. For example, in an area where drought has lowered yields, falling **prices** resulting from large worldwide production could have devastating consequences for local farm **incomes**. With such a downturn, some bankruptcies are likely to occur, and producers who are highly leveraged and have small financial reserves or lack off-farm **income** would be most vulnerable.

What do farmers themselves say about the **risks** they face? USDA's 1996 Agricultural Resource Management **Study** (ARMS), conducted in the spring of 1997 (about a year after passage of the 1996 Farm Act), asked producers how concerned they were that certain types of **risk** could affect the viability of their **farms**. Three **risk** factors of greatest concern to farm operators were uncertainty regarding commodity **prices**, declines in crop yields or livestock production, and changes in government law and regulation. Issues such as **price** and yield have historically been a focus of government farm programs. But new policy areas...correlated with a national corn yield, and therefore more negatively correlated with the national corn **price**. For wheat, where production is more dispersed and U.S. production is a smaller share...

...for example, implies that forward contracting or hedging in futures is more effective in reducing **income risk** than when a strong natural hedge exists. In this situation, locking in a sales price for part of the expected crop works to establish one component of the farm's **revenue**, reducing the likelihood of simultaneously low price and low yield. As a result, hedging can sometimes be an effective **risk** management strategy for **farms** outside major producing regions.

Deciding how much to hedge is more complicated than just assessing **price**-yield correlation. **Income risk** is also a function of **price** variability and yield variability. Hedging effectiveness declines as yield variability increases, and corn yields are...

...more variable outside the Corn Belt. Since yield variability tends to outweigh the impact of **price**-yield correlation, hedging is generally not as effective in less consistent production areas as in the Corn Belt.

No Single Approach Suits All **Farms**

While factors such as yield variability, **price** variability, and **price**-yield correlation can be used to gauge the likely effectiveness of various **risk** management strategies, producers' attitudes toward **risk** are also determinants in selecting strategies. Some farmers are less **risk** averse than others, and, for example, might feel more comfortable in a highly leveraged situation...insurance. Risk protection is greatest when crop insurance (yield **risk** protection) is combined with forward **pricing** or hedging (**price** **risk** protection).

Crop revenue insurance pays indemnities to farmers based on revenue shortfalls instead of yield or **price** shortfalls. As of 1998, three revenue insurance programs (Crop Revenue Coverage, Income Protection, and Revenue Assurance) were offered to producers in **selected** locations. All three are subsidized and reinsured by USDA's **Risk** Management Agency.

Search Report from Ginger R. DeMille

Household off-farm employment may provide a stream of **income** to the farm operator household that is more reliable and steady than returns from farming...

...according to USDA's ARMS data, 82 percent of all farm households reported off-farm **income** exceeding farm **income**. In every sales class (including very large **farms**), at least 28 percent of the associated farm households had off-farm **income** greater than farm **income**.

Detailed Description

Claims

Detailed Description

... or eliminated, many farmers' decision making processes will probably
change due to a changed risk **profile**, as the farmer will most likely
assume more market and production risk.

Farmers developing cropping...type and amount of crop insurance in the
context of the farmer's overall risk **profile**. Agricultural lenders
using the present invention can assist farmers with production planning
decisions, including determining...PREFERRED EMBODIMENTS

Described below is a preferred method for configuring and deploying a
custom farm **management** plan, and in particular, a **system** for
developing single-year or multi-year crop selection, acreage allocation
and resource **management** strategies for production **agriculture** so as
to evaluate trade-offs in farming objectives. These trade-offs include,
for example, one or more of the following: **profit** maximization, risk
minimization, resource minimization and environmental stewardship.
Preferably, the method may comprise one or...to be changed).

In creating a new scenario, first the user defines preferences as to
farms, fields and crop programs. Defining farms and fields involves the
delineation of discrete production land units on which production
planning scenarios are built. Defining crop programs includes forecasting
unit crop **prices** and crop yields to project **revenue** per acre as well
as developing variable production **costs** by identifying input quantities
and unit **costs**. The user then determines what controllable resources
(such as, for example, labor, water, equipment hours, crop storage, etc.)
to also include in the **analysis**.

Next, the user determines their profit goal 20, the name of the scenario

Search Report from Ginger R. DeMille

22 and...in crop prices, crop yields and crop production costs. Each scenario has a defined risk **profile** that includes parameters such as its potential profit given a specific set of crop prices...

Claim

... risk and resource use.

18 The method according to claim 16 wherein said desired farm **management** plan is determined from **profit** maximization, risk minimization, resource minimization, and environmental stewardship.

19 A farm **management system** for developing a custom farm **management** plan for production **agriculture** for a farm, comprising:
a. a first **computer**, said first **computer** comprising a first microprocessor, a first memory storage, and a first display;
b. a second **computer**, said second computer comprising a second microprocessor, a second memory storage, and a second display...based on gross income, downside risk, opportunity cost risk and resource use.

36 The farm **management system** according to claim 34 wherein said desired farm **management** plan is determined from **profit** maximization, risk minimization, resource minimization, and environmental stewardship.

37 A **computer program** for generating a custom farm **management** plan for production **agriculture** for a farmer pertaining to a farm, comprising:
a. a module for requesting and receiving...

Detailed Description

Claims

Detailed Description

... for enabling an

agricultural entity such as a specialty product provider to (i) identify preferred **farms** to contract with to produce crop(s) of interest; (ii) to **price** their contracts at a level that maximizes **profits** to the specialty product provider while ensuring adequate **profits** to the farmer(s) and acceptable **pricing** to the consumer; (iii) to reduce and/or minimize **risk** to the specialty product provider; and (iv) to perform additional economic **analysis** relating to crop production. To achieve these and other ends, the crop planner...

...farms, it is assumed that, to get farmers to grow the product of interest, the **farms** must be offered a **price** which gives them at least as much **profit** as other crops they can grow. These competing crops do not have to be...

...include any crop that competes for the farmer's land. Further, it is assumed that **profit** to the farmer, not revenue or unit **price**, is the deciding factor for **selecting** between crops from the farmer's perspective. Thus, a model for determining expected farmer profit...grow based on stored information relating to that farm and/or estimated information based on **profiling** (e.g., comparing the demographic **profile** of the farm of interest to a corresponding baseline farm **profile** in a table of farm **profiles**).

Once the competitive profit(s) of the competing crop(s) are determined, the product selector...agricultural entity based upon the preceding factors (a) through - 16 (e). If a farm under **analysis** is associated with more than one **elevator** and/or loader, the offer developer preferably determines the possible offer based upon the **elevator** /loader that will enable that farm to earn the highest **profit**.

The output of the offer developer 60 is preferably a set of possible offers that could be made to **farms** capable of growing the crop of interest.

Such possible offers preferably specify the amount of acreage, the expected yield and the **price** to offer the farmer. Preferably, one possible offer is saved in association with each farm capable of growing

Search Report from Ginger R. DeMille

the crop of interest.

Returning to FIG. 2, for the purpose of **selecting** famis to receive an offer to grow the crop of interest to the agricultural entity...
...transporting the crop of interest from a loader to the predefined location; (x) aggregate economic **profiles** of elevators associated with the farins in the set of fanus; and; (xi) aggregate economic **profiles** of loaders associated with the farins in the set of farms.
Preferably, the farin selector 70 includes a farm screener 72, an elevator/loader **profiler** 74, and an elevator/loader selector 76 as shown in FIG.

6. The fann screener...

...such as risk factor(s), expected profit(s) and/or expected quantities.

The elevator/loader **profiler** 74, develops an aggregate economic 1 5 **profile** for each elevator and/or loader associated with a farin in the preferred set of fanns developed by the farin screener 72. The aggregate **profile** of each of the elevators/loaders is preferably based upon cost and risk factors associated with the fanns associated with the subject elevator/loader. The **profiler** also relies upon tables covering the elevator/loader's historical performance based upon a variety of relevant factors (e.g., moisture control and split bins). In other words, the aggregate **profile** of an elevator/loader is developed by combining the cost/risk **profile** data of those farms serviced by that elevator/loader which are included in the preferred set identified by the - 18 fann screener. For example, the **profiler** could accumulate information relating to the elevator/loader's: (1) experience in receiving/delivering high...

...together with the performance of the associated farms, would be summed by the elevator/loader **profiler**. Each of the summed factors is preferably converted into an average or otherwise nonnalized to permit comparison of the **profiles** of elevators/loaders servicing different numbers of farms.

The elevator/loader selector 76 selects fanns...

...an offer to

1 0 grow the crop of interest based on the aggregate economic **profiles** developed by the elevator/loader **profiler** 74 and the quantity of the crop of interest to be grown. This selection is performed by comparing the aggregate **profiles** of the elevator/loaders to identify the best elevator(s)/loader(s) from a cost...

...a query and input type system.

In addition to the sales forecast table, farms and **elevators** /loaders to be included or excluded from consideration can optionally be input at this time...

...by the crop planner 1 0 is entered, the fann identifier 40 and the competition

analyzer 50 of the crop planner 10 access the product database 20, the **elevator** /loader database 22, 24, the product market **prices** database 26, the **transportation** market **prices** database 28, the **transportation** database 30, and 1 5 the farm database 32, and use the data retrieved therefrom to respectively identify the fanns capable

Search Report from Ginger R. DeMille

of growing the crop of interest and to estimate the **profits** each such farm can attain for other products (inverted exclamation mark) it might grow (block 200).

The **farms** capable of growing the product of interest and the "competing" products for each such farm are determined from what the **elevators** /loaders "servicing" each such farm will purchase. As explained below, other factors are also considered in the farm capability determination.

In order to estimate the **profits** for growing competing products, the crop planner 10 must include a model 110 for calculating the expected **revenue** 21 of the farms. The farm revenue model 110 preferably accesses the farm **database** 32 to determine farm specific data such as acreage, crops grown in the past, crop...

...www.farm-assist.com). Any of those models can be used to implement the farm **revenue** model 110.

After the estimated **profits** for the competing products that can possibly be grown by the **farms** are calculated, at block 103 (FIG. 7B) the offer developer 60 determines the **prices** (i.e., the product **prices** at the **elevator**) to offer the farmers for growing the product of interest ("own product"). The offer developer 60 takes into account the level of **profit** for each farmer for competing products, and any premium to be offered to the farmer to encourage acceptance of the offer. For example, farmers who are lower **risk** may be offered a higher premium.

After the possible offers are calculated, at block 104 the farm selector 70 performs the combined selection of **farms** and **elevators** /loaders to receive offers. As opposed to block 103, block 104 is performed from the ...

...a germplasm producer) seeking to contract with farmers. The selection is made to keep the **price** to the buyer 10 down while also considering the overall **risk** profile of being able to deliver the product, and the **profit** to be attained by the agronomic entity.

The Farm Identifier and Competition Analyzer
As mentioned above, the farm identifier 40 and the competition **analyzer** 50 cooperate to determine the competition for the farmer's business (e.g., other crops...

...the profit associated with them).

Since some farms can be served by more than one **elevator** /loader, the competition **analyzer** 50 iterates through the elevators /loaders, determining those which are reasonable to consider. For those which pass this test, the prices... makes this determination by accessing data in the farm database 32 indicative of the **risk profile** of the farm. The result ((inverted exclamation mark) i.e., the competitive offer (e.g., price... crop of interest (block 401). The farms are selected based upon best value (cost, **risk profile**), limiting selection to elevator capacity or to buyer quantity, whichever is less.

Search Report from Ginger R. DeMille

In computing costs...

...were violated, control proceeds to block 403.

15 At block 403, the elevator/loader **profiler** 74 of the farm selector 70 determines the transportation cost from the elevator/loader to the buyer for each elevator/loader under consideration.

The elevator/loader **profiler** 74 next computes the aggregate cost and risk **profile** for each elevator/loader under consideration based upon the selected farms and the transportation costs...

...the farm selector 70 selects the elevator(s)/loader(s) with the best cost/risk **profile** and the best farm(s) associated with those elevators/loaders to supply the total buyer...more plots in a single farm may have the same or different environmental or geographic **profiles** and/or may be serviced by the same or different elevator(s)/loader(s).

Although...

Claim

... from the crop of interest; and a farm selector cooperating with the offer developer to **select** farm-n from the set of farms to receive an offer to grow the crop...

...wherein. the farm-n selector selects farms based upon at least one of* the estimated **profits** developed by the offer developer, **risk** estimations associated with the **farms** in the set of farms, **profit** to be earned by an agricultural company, **price** to be charged consumers, **transportation** cost for **transporting** the crop of interest from a farm-n to a predefined location; **transportation** cost for **transporting** the crop of interest from a farm to a loader; **transportation** cost for **transporting** the crop of interest ~41 from a farm to an **elevator**; **transportation** cost for **transporting** the crop of interest from an **elevator** to the predefined location; transportation cost for transporting the crop of interest from a loader to the predefined location; aggregate economic **profiles** of elevators associated with the farms in the set of farms; and aggregate economic **profiles** of loaders associated with the farms in the set of farms.

3 An apparatus as...

...a local database.

7 An apparatus as defined in claim 5 wherein. the on-line **database** comprises an on-line exchange.

8 An apparatus as defined in claim 1 wherein the...

...loaders that cannot handle the crop of interest; and a farm discriminator cooperating with the **elevator** /loader discriminator for developing the set of **farms** by eliminating **farms** that are associated with only **elevators** /loaders identified by the **elevator**

Search Report from Ginger R. DeMille

/loader discriminator from the 43 set of **farms** and by eliminating **farms** that cannot grow the crop of interest from the set of **farins**.

9 An apparatus as defined in claim 1 wherein the competition analyzer further comprises:

a **profit** estimator for estimating a **profit** that a **fann** in the set of **farms** can expect to earn by growing the at least one crop which is different from the crop of interest; and
a product selector cooperating with the **profit** estimator to select a inost profitable crop for the **fann** from the at least one...

...crop of interest to be produced by a **fann** of interest in the set of **farms**; and

a **pricing** engine cooperating with the production estimator to develop a **price** to be offered the **fann** of interest to grow the quantity of the crop of...

...An apparatus as defined in claim 1 0 wherein the offer developer further comprises a **risk** identifier in communication with the - 44 database for (inverted exclamation mark)dentifying a risk factor...

...1 the **fann** selector further comprises:

a **fann** screener in communication with the database for **selecting** a preferred set of **fanns** from the set of **fanns** based on atleast one of...

...a risk

factor, (ii) an expected profit, and (iii) an expected quantity;
an elevator/loader **profiler** for developing an aggregate economic **profile** for each elevator/loader associated with a **flann** in the preferred set of farmers; ...to receive an offer to grow the crop of interest based on the aggregate economic **profiles** developed by the 'elevator/loader' **profiler** and the quantity of the crop of interest to be grown.

13 An apparatus as defined in claim 1 wherein the competition **analyzer** estimates the profits to be earned by **fiarms** in the set of **fianns** for growing...

...the elevators are based at least in part upon cost and risk associated with the **farms** associated with the elevators.

17 An apparatus, as defined. in claim. 2 wherein. the aggregate...

...the loaders are based at least in part upon cost and risk associated with the **farms** associated with the loaders.

1 S. A method for selecting **farms** to grow a crop of interest comprising the steps of.

developing a set of **farms** capable of growing the crop of interest; estimating **profits** to be earned by **farms** in the set of **farms** for growing

at least one crop which is different from the crop of interest;

46

determining possible offers to be made to the **farms** in the set of **faiTns**

based at least in part upon the estimated **profits** to be eamed for

Search Report from Ginger R. DeMille

growing the at
least one crop which is different from the crop of interest; and
selecting fanns from the set of **farms** to receive an offer to grow the
crop of interest.

19 A method as defined...

...wherein the step of selecting
fanns is based upon at least one of. the estimated **profits** developed by
the offer developer, risk estimations associated with the fanns in the
set of **farms**, **profit** to be came by an agricultural company, **price**
to be charged consumers, transportation cost for transporting the crop of
interest from a fann...

...transportation cost for transporting the crop of interest from an
elevator to the predefined location; **transportation** cost for
transporting the crop of interest from a loader to the predefined
location; aggregate economic profiles of **elevators** associated with the
farms in the set of fanns; and aggregate economic **profiles** of loaders
associated with the farms in the set of fanns.

20 A method as...of
identif,ving a risk factor associated with the fann of interest; and
adjusting the **price** to be offered the fann of interest to grow the
quantity of the erop of...

...34 A method as defined in claim 19 wherein the aggregate
economic profiles of the **elevators** are based at least in part upon cost
and **risk** associated with the fam-is associated with the **elevators**.

35 A method as defined in claim 19 wherein the aggregate
economic profiles of the loaders are based at least in part upon cost and
risk associated with the fiarms associated with the loaders. - 51

. A method for estimating future **profits** for **farms** in a region of
interest for growing a crop of interest, the method comprising the steps
of.

identify(inverted exclamation mark)ng **farms** in the region of interest;
electronically accessing at least one on-line market to ascertain at
least one current market **price** for at least one product different than
the crop of
interest;

determining projected **profits** to each of the fanns in the region of
interest for growing products different than the crop of interest based
at least

partially on the at least one current market **price**;

selecting at least one of the produets to be replaced by the crop of
interest on at least some of the fanns in the region of interest;

detennining **profits** to be earned by the at least some of the **farms**
for

growing the crop of interest; and

summing the **profits** to be eamed by the fan-ns in the region of interest
for growing the crop of interest.

37 An apparatus for detennining a **price** to offer a fanner to grow a
crop of interest coniprising:

a database containing current market **price** data for crops which are
different from the crop of interest;

a profit estimator in...

Search Report from Ginger R. DeMille

...from the crop of interest;
- 52 a product selector cooperating with the profit estimator to **select**
a crop from the at least one of the crops which are different from the...

...the crop of interest to be produced by a farmer
on acreage associated with the **selected** crop; and
developing a price to be offered the farmer of interest to grow the...

...part on the profit that 53 the farmer can expect to earn by growing the
selected crop which is different than the crop of interest.

39 A method as defined in claim 38 wherein the step of
developing a **price** further comprises the steps of
identifying a **risk** factor associated with the farmer of interest; and
adjusting the **price** to be offered the farmer of interest to grow the
quantity of the crop of interest based at least in part upon the **risk**
factor.

40 A method for developing economic information relating to
activities of farmers comprising the steps of
identifying **farms** capable of growing a crop of interest;
electronically accessing at least one on-line market to ascertain at
least one current market, **price** for at least one product different than
a crop of
interest;
determining projected **profits** to the identified farms for growing at
least one product different than the crop of interest based at least
partially
upon the at least one current market **price** ;
selecting at least one of the products to be replaced by the crop of
interest on...

...at least one of the products will have on at least one of. (a) a
transportation - 54 market; (b) a commodity market; (c) demand for
storage space; (d) land usage; (e...

XRPX Acc No: N94-201443

**Data processing network for feeding farm animals esp. cattle in feedlot
- uses multiple data processing units to display and control rate of
feeding to multiple pens**

Patent Assignee: LEXTRON INC (LEXT-N)

Inventor: ACKERMAN M A; CARISH J; CURETON J S; BREWSTER S H

Number of Countries: 003 Number of Patents: 006
